                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           adult respiratory distress syndrome, anaemia, asthma, atherosclerosis, Crohn's disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, osteoarthritis, rheumatoid arthritis, scleroderma, systemic lupus
                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

(II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG00377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed appear for interpretation, but was obtained in electronic format directly from WIPO
AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of thinvention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs pro-drugs directly to the fat mass of an obese patient or the antibody
                                                                                                                                                                                                                                                           Panel of specific whole adipocytes i related diseases -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a call or tissue sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Variable light chain; single chain antibody; scFv; human; HIb-2; glycoprotein Ib alpha; platelet; aggregation; antiaggregant; antithrombotic; thrombus; therapy; diagnostic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intraabdominal fat associated with heart disease.

which is directed against platelet glycoprotein Ib (GPIb). The HIB CS series of scFv was isolated from a human synthetic VH and VL scFv (1) library by 3 rounds of phagemid selection against transfected CHO (CC cells expressing the GPIb alpha component of the GPIb/IX/V complex (CC nother surface, followed by a 4th round of selection against CC washed human platelets, and 2 final rounds in which attempts were made to displace scFv from washed platelets by flooding with (CC murine monoclonal antibody or mimotope peptide (see AAY95229). Whether displayed as surface proteins on a phagemid or secreted (CC as free scFv by Escherichia coli, the HIB scFv clones are capable (CC platelets. The scFv are composed of native human protein sequences (CC platelets. The scFv are composed of native human protein sequences (CC purposes. They provide a new class of antithrombotic agents, or useful for the prevention of platelet-dependent thrombi in (CC diseased arteries, bypass graffs, dialysis etc., and can also be (CC used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPIb alpha and of selecting a vH or VL region of an antibody that inhibits platelet aggregation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid molecule glycoprotein Ib alpha molecule

                New fusion protein, useful for diagnosis of diabetes type I metabolic diseases, is reactive with autoantibodies against glutamate decarboxylase and islet cell antigen .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to producing gene libraries, comprising immunoglobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a collection of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Producing gene libraries and antibody libraries, involves s

This invention relates to a human anti-hepatitis B monoclonal antibody. Included in the invention are polynucleotide sequences AAC99948 - AAC96955 which encode fragments of the heavy and light chains of the antibody. Proteins and peptides represented by sequences AAB52185 - AAB52210 are fragments of the anti-hepatitis B light and heavy chains.
                                                                                                                                                                                                                (NISN )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polyglandular autoimmune syndrome or other autoimmune conditions associated with AAb against GAD65 or IA2. (I) provides a rapid and simple diagnosis of high specificity and sensitivity, capable of recognizing antibodies against both IA2 and GAD65, simultaneously. Unlike known fusions, where the GAD65 component is at the V-terminus, (I) contains correctly folded conformational epitopes that can react with most MICA autoantibodies. This sequence represents the human autoantibody MICA-6 variable region heavy chain used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel fusion protein (I) that has, at its N-terminus, one or more epitopes that bind specifically to autoantibodies (AAb) against the islet cell antigen IA2 and, at its C-terminus, one or more epitopes that bind specifically to antibodies (Ab) directed against the glutamate decarboxylase GAD65. (I), also nucleic acid (II) encoding it, vectors containing (II) and transformed cells, are useful for diagnosis and prognosis of diabetes mellitus type 1, stiff-man syndrome,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
            and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and
                                                                                                                                                                                                                                                                   The present sequence represents an antibody variable light chain (Variament. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Also included in the invention are PCR primers AAC96956 - AAC96977 which are used in the construction of the antibody. The antibody exhibits antiinflammatory, and hepatotrophic activity, and can be used in a drug effective at preventing hepatitis B infection.

                                          The present sequence is a recombinant human antibody scFv. Antibody TNI1 reacts with the long form of human Tenascin-C (TN-C). The epitope recognised by TNI1 is located inside domain C of TN-C. TNI1 is therefore only capable of recognising TN-C isoforms containing domain C (cTN-C). TNI1 is useful for detecting the presence of TN-C isoforms in vitro or in vivo for diagnosing pathologies expressing the cTN-C isoforms of TN-C.
                                                                                                                                                           Ligands used for diagnosis capable of identifying the tenascin-C -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                    of the c-erbB-2 receptor, the protein product of the HER/neu oncogene. The scFv F5 antibody binds to the epitope of the c-erbB-2 receptor that is bound by F5 antibodies. On binding the c-erbB-2 receptor, the antibodies is transported into the cell. The c-erbB-2 receptor is a marker protein which is overexpressed by 30-50% of breast carcinomas and other adenocarcinomas, and thus provides a useful cell surface marker for specifically targetting tumour cells. The antibodies of the invention are used as tumour-targetting molecules for diagnosis and treatment. The antibodies can be attached to effector molecules. The effector molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC as vinblastine, vindesine or melphalan; ribozymes; or antisense CC molecules. The antibodies may also be used for in vivo or in vitro CC detection and/or quantitation of the c-erb-2 receptor and thus diagnosis CC and/or localisation of cancers characterised by expression of c-erb-2. CC their success has been limited. The utility of prior art antibodies has been limited and toxicity reduced if high affinity CC immunogenicity, low binding affinity, and poor tumour penetration. CI Immunogenicity could be avoided and toxicity reduced if high affinity CC tumour specific human antibodies were available. However, the production of human monoclonal antibodies using conventional hybridoma technology has proven difficult. Also, most of the antibodies produced react with CC antigens that are also common to non-malignant cells, which makes them CC unsuitable for use as tumour-targetting molecules. The antibodies of the invention overcome these difficulties, as they are targetted to a cre human in criticin and avoid the problem of immunogenicity as they

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-
 and/or
                   fragment.

The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of filamentous

```
disorder where II-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-II-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human II-12, methotrexate, anti-tunor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-II-18 antibody LT28 light chain sequence.

A

A new high-affinity monoclonal antibody that is characterized by acid-washed enzyme-linked immunosorbent assay for use in cancer t Carcinoembryonic antigen; CEA; sheep; monoclonal antibody; tumour associated antigen; anti-carcinogenic; cytostatic; cancer therapy. WPI; 2000-375618/32. N-PSDB; AAA08400. Carcinoembryonic antigen affinity antibody heavy chain variable region. 13-JUL-2000 (first entry) Harrison PJ; (KSBI-) KS BIOMEDIX LTD. 28-AUG-1998; 20-AUG-1999; 09-MAR-2000. The antibody is used in cancer therapy. Association of the new antibody with an antigen is favoured over dissociation in vivo and they therefore concentration of antibodies localised at the target sites. Targeting the antibody to a site in vivo is improved. The concentration of antibody does not need to be too high which reduces side-effects and costs of therapy. The present sequence represents the heavy chain variable region of a monoclonal antibody having affinity for carcinoembryonic antigen (CEA, a tumour associated antigen), which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an antibody-toxic group conjugate comprising CC an antibody that specifically recognises a molecule expressed only on CC activated T cells, and a toxic group. The T cell molecule is CC preferably human cytotoxic T lymphocyte associated antigen 4 (CTLA4). CC The antibody of the invention is a humanised anti-CTLA4 antibody CC comprising a sequence of 128 or 142 amino acids fully defined in the specification. The antibody-toxic group conjugate is useful for CC modulating the immune response in a subject suffering from a disorder CC or condition such as autoimmune disorder, immune response to a graft, CC allergic response or an immune response to a therapeutic protein.
CC The antibody is also useful for research purposes, e.g., in staining CC and isolating CTLA4-bearing cells. The antibody is also useful for CC T-cell typing, for isolating specific II-2 receptor-bearing cells or CC Tegments of the receptor, for vaccine preparation, and for determining the effectiveness of an agent to down-regulate CTLA4 activity. The CC antibody is the heavy chain of humanised anti-CTLA4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is a mutant of the variable heavy (VH) chain of the CC antibody TM27. TM27 is an immunoglobulin G [196] antibody, contained in CC the isotonic pharmaceutical formulation of the invention, along with a CC citrate buffer at a physiologically acceptable pH. The formulations are CC useful in medical therapy, especially for treatment of autoimmune CC disease, and particularly, therapy of multiple sclerosis (using the TM27 CC antibody heavy or light chains). The formulation is useful for improving the storage of an antibody. The antibody formulations are simple and CC effective. The formulations are stable and have improved storage CC properties. The formulations require than prior art formulations. CC Existing antibody formulations require the use both of a stabiliser and a CC buffer. The present invention formulations are stabile and only by citrate buffer in a saline solution at a physiologically preferable pH. The CC injection. The formulation does not use ovalbumin for stabilisation, CC hence avoiding an allergic response to ovalbumin for stabilisation. CC constitution and allergic response to ovalbumin for stabilisation. CC constitution and physiologically preferable formulation cCC constitution and physiologically preferable pH. The constitution and physiologically preferable pH. The constitution are stabilisation and constitution as the site of constitution and physiologically preferable pH. The constitution and physiologically preferable pH. The constitution are successed and also the formulation to be resuspended prior to administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                          CC This sequence represents the variable heavy (VH) chain of the CC antibody TM27. TM27 is an immunoglobulin G (IGG) antibody, contained in CC the isotonic pharmaceutical formulation of the invention, along with a CC citrate buffer at a physiologically acceptable pH. The formulations are CC useful in medical therapy, especially for treatment of autoimmune CC disease, and particularly, therapy of multiple sclerosis (using the TM27 CC antibody heavy or light chains). The formulation is useful for improving CC the storage of an antibody. The antibody formulations are simple and CC effective. The formulations are stable and have improved storage CC properties. The formulations require than prior art formulations. CC Existing antibody formulations require the use both of a stabiliser and a buffer. The present invention formulations are stabilized only by citrate CC buffer in a saline solution at a physiologically preferable pH. The CC avoidance of low pH prevents undesirable reaction as the site of CC injection. The formulation does not use ovalbumin Also the formulation CC does not require lyphilisation. Also the formulation of constantiation that the two process and also recently process and also require the formulation to the formulation of the process and also recently process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

It can be coexpressed with humanised 1D10 light chain (see also AAW05828) in e.g. mouse myeloma NSO cells. Humanised antibody fragments can be incorporated into novel bispecific antibodies reactive with both effector cell antigens (see also AAW05824-25, AAW05826 and AAW05830) and malignant B-cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 14; Fig 4b; 85pp; English.

                                                                                                                                                                                                                                                                                              $\times \times \
                                                                                                                                                                                                                                                                                                                                                     This sequence is a mutant of the variable heavy (VH) chain of the cantibody TM27. TM27 is an immunoglobulin G (196) antibody, contained in the isotonic pharmaceutical formulation of the invention, along with a citrate buffer at a physiologically acceptable pH. The formulations are useful in medical therapy, especially for treatment of autoimmune cd isease, and particularly, therapy of multiple sclerosis (using the TM27 cantibody heavy or light chains). The formulation is useful for improving the storage of an antibody. The antibody formulations are simple and ceffective. The formulations are stable and have improved storage properties. The formulations require than prior art formulations. CC Existing antibody formulations require the use both of a stabiliser and a buffer. The present invention formulations are stabilized only by citrate cuffer in a saline solution at a physiologically preferable pH. The CC avoidance of low pH prevents undesirable reaction as the site of claretion. The formulation does not use ovalbumin for stabilisation, chance avoiding an allergic response to ovalbumin. Also the formulation comparison to the process and also requires the formulation to be resuspended prior to administration.
                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-MAR-1998;

                                                                                                                                                                                                                                          The humanised 1D10 antibody heavy chain (AAW05827) includes a variable region (see also AAW05823) consisting of human R3.5HG heavy chain variable region framework and complementarity determining regions from the murine 1D10 antibody specific for a 28/32 kDa antigen found on the surface of malignant B-cells. It can be coexpressed with humanised 1D10 light chain (see also AAW05828) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M291 heavy and light chain variable regions (see also AAW05826, AAW05830), and a sec binding fragment comprising humanised 1D10 heavy and light chain variable regions. Such antibodies are reactive with both T or NK

                                                                                The humanised ID10 antibody heavy chain (AAW05829) includes a variable region (see also AAW05823) consisting of human R3.5HG heavy chain variable region framework and complementarity determining regions from the murine ID10 antibody specific for a 28/32 kDa antigen found on the surface of malignant B-cells. It can be coexpressed with humanised ID10 light chain (see also AAW05828) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M291 heavy and light chain variable regions (see also AAW05826, AAW05830), and a second
                                                                                                                                                                                                                                                                                                                                                                                   New bispecific antibody reactive with both T or NK cells and malignant B cells - also their humanised forms and hybridomas producing them, useful for treating or preventing leukaemia,

    This sequence is a mutant of the variable heavy (VH) chain of the cantibody TM27 TM27 is an immunoglobulin G (IgG) antibody, contained in the intention, along with a critrate buffer at a physiologically acceptable pH. The formulations are useful in medical therapy, especially for treatment of autoimnune clises, and particularly, therapy of multiple sclerosis (using the TM27 antibody heavy or light chains). The formulation is useful for improving the storage of an antibody. The antibody formulations are simple and effective. The formulations are stable and have improved storage properties. The formulations are stable and have improved storage buffer. The present invention formulations are stabilized only by citrate buffer. The present invention formulations are stabilized only by citrate buffer in a saline solution at a physiologically preferable pH. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hence avoiding an allergic response to ovalbumin. Also the formulation does not require lyophilisation which is an expensive process and also requires the formulation to be resuspended prior to administration.

This sequence is a mutant of the variable heavy (VH) chain of the antibody TM27. TM27 is an immunoglobulin G (19G) antibody, contained the isotonic pharmaceutical formulation of the invention, along with citrate buffer at a physiologically acceptable pH. The formulations useful in medical therapy, especially for treatment of autoimmune disease, and particularly, therapy of multiple sclerosis (using the antibody heavy or light chains). The formulation is useful for impro

The antibody formulations are simple and effective. The formulations are stable and have improved storage properties. The formulation is simpler than prior art formulations. Existing antibody formulations require the use both of a stabiliser and buffer. The present invention formulations are stabilized only by citrat buffer in a saline solution at a physiologically preferable pH. The avoidance of low pH prevents undesirable reaction as the site of injection. The formulation does not use ovalbumin for stabilisation, hence avoiding an allergic response to ovalbumin. Also the formulation does not require lyophilisation which is an expensive process and also requires the formulation to be resuspended prior to administration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exclusively at one or more preselected sites. The conjugate is capable of delivering the antigen to APC and eliciting an immune response to the antigen. The new conjugates are useful as vaccines and are able to elicit an enhanced immune response without the use of an adjuvant. In a specific example, a conjugate was constructed using the murine anti-human class II monoclonal antibody secreted by hybridoma 44H104. The peptide CLTB36 was chosen as antigen; it consists of a tandemly linked T and B cell epitope derived from HIV MN strain. The present sequence represents the heavy chain variable region from 44H104 which was used in the preparation of a conjugate with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Кеу
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               105224 seqs, 38719550 residues

MISCELLANEOUS: THIS IS A BENCE-JONES PROTEIN.

MISCELLANEOUS: THE MCG-TYPE C REGION APPEARS TO BE CORRELATED WITH A VERY UNUSUAL V-REGION SUBSTITUTION, 103-THR ABOVE FOR GLY,

SUGGESTING THAT THE V-C JOINING MECHANISM IS NOT ALWAYS RANDOM.

MISCELLANEOUS: THE C REGION OF THIS CHAIN HAS THE KERN+ AND MCG+
